Forage Varieties

<sup>1</sup> Due to reduced rust resistance this variety may require a fungicide application, under conventional systems, in rust-prone areas.

Oegema Grains recommends the frequent scouting of oats fields for both insects and plant diseases from early in the growing season through heading. If leaf fungal diseases are seen, the timely application of registered and approved fungicides for non-organically grown oats is approved and recommended to enhance both yield and grain quality potential. Contact Oegema Grains for more information.

At the time of publication, it is believed that the varieties listed above, combined with good agronomic characteristics and management, should provide the best opportunity for growers to produce food quality oats. Before purchasing or planting oat varieties not listed, please contact Oegema Grains to discuss attributes of other varieties considered.
